Core Components of a Hospital Record Management System ERD

To develop an effective ERD for a hospital record management system, several core entities and their relationships must be considered. These components are fundamental to capturing the hospital's operational data.

Key Entities in the ERD

- Patient
- Doctor

This involves timestamp attributes and version control mechanisms within ERDs.

Supporting Multiple Insurance Policies

Patients may have multiple insurance policies. ERDs can include junction tables like Patient_Insurance to manage many-to-many relationships, with attributes such as policy_start_date and policy_end_date.

Implementing Hierarchical Entities

Departments and sub-departments can be represented hierarchically, facilitating detailed organizational structures within ERDs.

Case Study: Sample ERD for a Hospital Record System

A typical ERD might encompass entities such as:
